EDUCATION

UTeM - FTMK
Bachelor of IT (Game Tech)
Expected: Mar/Apr 2027
CGPA: 3.40 (Year 3, Sem 2)

TECH SKILLS

Unity & C#

Unreal Engine & C++

Photon PUN 2

Godot / GDevelop / Raylib

Python / Java / JS / C++

MySQL / SQL (XAMPP)

LANGUAGES

English Malay Mandarin Korea

SOFT SKILLS

Teamwork & Collaboration
Clear Communication
Analytical Problem-Solving
Game Design & Storytelling

POON KAH HOE

GAME DEVELOPER & PROGRAMMER

PROFILE

Versatile and detail-oriented Game Technology student with a strong foundation in gameplay programming, multiplayer networking, and interactive simulations. Proficient across multiple engines including Unity, Unreal Engine, and Godot. Experienced in implementing complex mechanics from competitive multiplayer architectures to VR industrial training systems. Actively seeking an internship to contribute to innovative game development teams.

ACHIEVEMENTS & AWARDS

Silver Award (Play Next, Game Jam, DTC,UTeM)

Awarded for the innovation and design of the 2v2 competitive multiplayer game "Football Madness".

Gold Award (Workshop II Innovation Competition)

Conferred by Ipetro Services Sdn Bhd & UTeM for excellence in the "iPETRO: Zero Leak Challenge" VR project.

Dean's List Award

Universiti Teknikal Malaysia Melaka (UTeM) | Year 3, Semester 1 (CGPA: 3.40).

KEY PROJECTS

Football Madness

Unity | Photon PUN 2 | C#

- Engineered a competitive 2v2 multiplayer football game with reliable matchmaking, client-side prediction, and server synchronization.

THE FINAL CHAMBER (Final Year Project)

Unity | Photon PUN 2 | C#

- Developed a 4-player cooperative educational escape game, engineering robust real-time networking and synchronized puzzle mechanics.

iPETRO: Zero Leak Challenge

Unity | VR | C#

- Lead Programmer for an immersive industrial AR/VR training simulation, creating risk-free interactive mechanics for flange assembly and leak detection.

Airport Kiosk Ticket Booking System

C++ | MySQL (XAMPP) | Database Integration

- Developed a robust terminal-based booking system with user authentication, ticket management, and an admin dashboard for real-time sales tracking.

Pro Snooker Physics Simulation

Processing (Java)

- Programmed a custom 2D physics engine from scratch, handling complex rigid body dynamics, collision detection, and environmental friction.

Local Multiplayer Car Racing

Unreal Engine | C++ | Blueprints

- Engineered a split-screen racing simulation focusing on precise vehicle physics and dynamic camera management.
